

Data uploading

Eyra relies on uploading your to a centralized server. It therefore needs a consistent internet connection. If you think that your internet connection is inconsistent or slow you can do the recording offline and then upload the data once you have a good connection. To do that do the following:

1. Make sure that you have switched your wifi or data off so that Eyra will not try to sync automatically
2. Record a batch of data offline. The data is now stored locally. You can either do 100 or 200 recordings or go all the way to 500. Make sure that you have at least 400 mb of free disk space on your phone if you are going to record 500 utterances since they will be stored locally on your phone.
3. Once you are ready to upload your data:
 - a. Make sure you have a good connection (Wifi or data)
 - b. Chose "Sync" from the menu bar
 - c. Press the Sync button that appears on the new page
4. Wait for the syncing to finish. It can take about 30 minutes for 500 prompts to upload on an average connection. Slower connection take longer time, faster connections take shorter time.
5. When the upload is finished the text will say 'Sync complete.'. Well done.

You can always use the sync feature to verify if you have any recordings that haven't uploaded, even if you are recording online. Just make sure that your internet connection is consistent and be patient, especially if there are many recordings that need to upload.
